

Contents

Chapter 1	General introduction	9-18
Chapter 2	Study design: effectiveness and cost-effectiveness of post-discharge nutritional support in malnourished elderly patients in comparison with usual care	19-34
Chapter 3	Post-discharge nutritional support in malnourished elderly patients decreases functional limitations	35-48
Chapter 4	Post-discharge nutritional support in malnourished elderly patients decreases functional limitations with no extra costs	49-68
Chapter 5	Short-term oral nutritional intervention with protein and vitamin D decreases falls in malnourished elderly patients	69-86
Chapter 6	Effects of nutritional intervention on immune markers in malnourished elderly	87-106
Chapter 7	Resting energy expenditure in malnourished elderly patients at hospital admission and three months after discharge: predictive equations versus measurements	107-128
Chapter 8	Should we feed malnourished cognitively impaired hospitalized elderly patients?	129-142
Chapter 9	General discussion	143-156
Summary		157-160
Samenvatting		161-164
Dankwoord		165-170
