

Acknowledgements

First of all I would like to thank my beloved country Thailand and the National Science and Technology Development Agency (NSTDA) of the Royal Thai Government for the scholarship they provided me during the four years of my PhD program. Most of my research studies were performed within the framework of the Center for Translational Molecular Medicine (CTMM) AIRFORCE project. Therefore, my gratitude goes out to CTMM as well, because of their financial support, e.g. for attending international conferences. I received a lot of help during the last four years of my research from various people. Unfortunately, I cannot name all the people who have contributed to this successful event. So anyone who did help me the last four years is deeply thanked for his or her help and support. There are, however, some people I want to thank personally.

I would like to express my gratitude to my promotor, **prof. dr. Adriaan A. Lammertsma**, who has greatly helped me with his valuable suggestions, including enhancing the intellectual content of all the manuscripts. In addition, I am really grateful for the opportunity he gave me for fulfilling a PhD position in his department.

Special thanks to my first copromotor, **prof. dr. Ronald Boellaard**, who has also advised me how to perform research. Apart from performing a study design of the research projects, he always gave me valuable suggestions for data analyses and, of course, he revised and enhanced the intellectual content of all my manuscripts. I have conducted all research studies described in this thesis under his supervision.

I deeply thank my second copromotor, **dr. Floris H.P. van Velden**, who is a warm and friendly person. He advised me many times in drafting my manuscripts. He also helped me with the revisions during the process of the reviewed papers. In addition, he advised me on how to use the specific programs to allow me to make a perfect thesis. However, there were a lot of other things he helped me with, but I cannot describe them all.

Without the help and advice from my promotor and my two copromotors, I would never have been able to complete my study within four years. Therefore, I would really thank them again for the guidance, supervision and pleasant cooperation.

I am grateful to all members of the reading committee, **prof. dr. Ursula Nestle** from Universitaetsklinikum (Freiburg, Germany), **prof. dr. Sigrid Stroobants** from University Hospital of Antwerp (Belgium), **prof. dr. Dirk de Ruyscher** from GROW—School for Oncology and Developmental Biology (Maastricht), **dr. Eric P. Visser** from Radboud University Nijmegen Medical Center (Nijmegen), **prof. dr. Egbert F. Smit** and **prof. dr. Guus A. M. S.**

Acknowledgements

van Dongen from VU University Medical Center for their advice and the time they have spent in reading the draft version of my thesis.

Special thanks to **dr. Maqsood Yaqub** for reviewing all manuscripts and for implementing the tools to perform tumor delineations; **Nikie J. Hoetjes** who is one of my ‘paranimfen’ and helped me with carrying two heavy suitcases when I just arrived in The Netherlands; **Reina W. Kloet** who made a good tasting ‘lasagna’; **dr. Jurgen E.M. Mourik** who organized a nice trip to the Gouda Cheese Market and baked good tasting ‘pannekoecken’ (Dutch Pancakes). All of them have provided me with a lot of help, especially when it comes to phantom acquisitions, data analyses, and the use of patient data. They were all very friendly and helpful, for which I am very thankful.

Thanks to all of my colleagues in the **J-Wing**: Hans J. Harms, Andrei Postnov, Nikos E. Makris, Ida A. Nissen and Manfred van der Vlies. Also to the colleagues in the **H-Wing**: Thalia van der Doef, Virginie Frings, Eline Verwer and Lieke L. Hoyng. . . Thank you all for your friendships, including sharing your experiences during lunch for these last four years. In addition, I would like to wish Thalia, Virginie, Eline, Lieke, Hans and Nikos all the best with their PhD theses. Please do not forget to invite me when they are finished ☺.

I am also very grateful to **prof. dr. Otto S. Hoekstra**, **prof. dr. Emile F.I. Comans**, and **dr. Adrianus J. de Langen** from VU University Medical Center, **dr. Corneline J. Hoekstra** from Jeroen Bosch Hospital, **dr. Wouter van Elmpt** from GROW—School for Oncology and Developmental Biology, and **Linda M. Velasquez** and **dr. Wendy Hayes** from Bristol—Myers Squibb Co. for providing me valuable comments and revising my manuscripts. I appreciate you all for your collaboration and contributions to my research projects. In addition, I would also thank to dr. Astrid A. M. van der Veldt from VUmc and dr. Angela van Baardwijk from GROW—School for Oncology and Developmental Biology for advice on the CT delineations.

I am grateful to all the people who helped and advised me during my PhD period in VU University Medical Center: dr. Arthur van Lingen, dr. Marc C. Huisman, dr. ir. Mark Lubberink, dr. Saskia Wolfensberger, Amanda Kroonenberg-Kalwijk, Jaap van der Kuij, Remi Schmeits, Suzette van Balen, Robert Schuit, Henri Greuter, dr. Gert Luurtsema, Kevin Takkenkamp, and everyone who works in the department of Nuclear Medicine & PET Research.

Many thanks to the Royal Thai Embassy in Den Haag and the Thai Students Association in the Netherlands for organizing various activities which made me feel as if I was in my home-country (Thailand). Thank to my bosom friend, Naphat Tangnopparat, who arranged a lovely trip during my vacation in Los Angeles, USA. Special thanks to everyone who helped and advised me for getting a scholarship as well as those people who helped prescribing the scholarship both before and during my stay in Amsterdam: Somchai Injorhor (from the NSTDA),

Pornpit Somwong (from the Office of the Civil Service Commission), Matana Kester and Watanya Singhasa (from the Royal Thai Embassy). A personal thank you goes out to Taratip Narawong who kindly reviewed the Thai version of the summary of my thesis.

Finally, I would really thank to my parents, **Sorasak** and **Sead-fa**, who provided great spiritual support during my life. I also appreciate the help and support from the people close to me: Worawit and Worawut (my brothers), Patsorn (my sister), Suthatip (my lovely aunt) and Somchai Thunganantiganunt (my uncle). They took great care for each other when I was in Amsterdam, so that I could spend all the time to focus on my study. I would like to share the honor of having completed this thesis to my loving family.
