

## TABLE OF CONTENTS

Chapter 1	General introduction	7
Chapter 2	Tubercle bacilli rely on a type VII army for pathogenicity	17
Chapter 3	Zebrafish embryo screen for mycobacterial genes involved in the initiation of granuloma formation reveals a newly identified ESX-1 component	37
Chapter 4	<i>Mycobacterium marinum</i> zebrafish embryo screen identifies polyphosphate kinase 1 (PPK1) as an important factor for virulence and granuloma formation	61
Chapter 5	Analysis of SecA2-dependent substrates in <i>Mycobacterium marinum</i> identifies protein kinase G (PknG) as a major virulence effector	87
Chapter 6	Mannan core branching of lipo(arabino)mannan is required for initiation of mycobacterial granuloma formation <i>in vivo</i>	115
Chapter 7	Summarizing discussion	135
Chapter 8	Addendum	147
	Nederlandse samenvatting	149
	Acknowledgements/Dankwoord	155
	Curriculum Vitae	157
