

Contents

Chapter 1	General introduction	7
	1.1 History of DNA research	9
	1.2 Impact of molecular diagnostics in pathology	9
	1.3 DNA variations	10
	1.3.1. Single nucleotide polymorphisms	10
	1.3.2. SNP associated traits and disorders	11
	1.4 Somatic mutations and cancer	13
	1.4.1. Loss of heterozygosity	13
	1.4.2. Oncogene amplification	16
	1.5 Applications of SNP detection in molecular diagnostics	16
	1.5.1. SNP genotyping methods	16
	1.5.2. Tissue identification	17
	1.5.3. Cancer diagnostics	18
	1.5.3.A. LOH of the <i>JAK2</i> locus in myeloproliferative disease	18
	1.5.3.B. <i>HER2/TOP2A</i> locus in breast cancer	19
Chapter 2	Comparative analysis of four methods to extract DNA from paraffin-embedded tissues: effect on downstream molecular applications	33
Chapter 3	Single nucleotide polymorphism profiling assay to confirm the identity of human tissues	49
Chapter 4	Single nucleotide polymorphism profiling assay to exclude serum sample mix-up	69
Chapter 5	Sensitive detection and quantification of the <i>JAK2V617F</i> allele by real-time PCR: blocking wild-type amplification by using a peptide nucleic acid	81
Chapter 6	Single nucleotide polymorphism (SNP)-based loss of heterozygosity (LOH) testing by real time PCR in patients suspect of myeloproliferative disease	97
Chapter 7	Allelic imbalance at the <i>HER2/TOP2A</i> locus in breast cancer	117
Chapter 8	8.1 Summary and general discussion	139
	8.1.1. Technological advances	139
	Chapter 2 Optimizing DNA extraction	140
	Chapter 3 and 4 Confirming the identity of human tissues	141
	Chapter 5 Determining <i>JAK2V617F</i> mutational status	142
	Chapter 6 Loss of heterozygosity of the <i>JAK2</i> genomic region	143
	Chapter 7 Allelic imbalance at the <i>HER2/TOP2A</i> locus	144
	8.2 Venturing beyond the scope of this thesis: bacterial SNP genotyping	146
	8.3 Concluding remarks	147
Chapter 9	Nederlandse samenvatting en discussie	157
	Dankwoord	169
	Curriculum vitae	171
	List of Publications	173
