Chapter 1 General introduction	7
Chapter 2 Association of serum c-reactive protein and erythrocyte sedimentation rate with muscle strength in patients with knee osteoarthritis	23
Chapter 3 Elevated c-reactive protein is associated with lower increase in muscle strength in patients with knee osteoarthritis: A 2 year follow up study in the AMS-OA cohort	39
Chapter 4 Increase in knee muscle strength is associated with a decrease in activity limitations in patients with established knee osteoarthritis: A 2 year follow up study in the AMS-OA cohort	59
Chapter 5 Association of postural control with muscle strength, proprioception, self-reported knee instability and activity limitations in patients with knee osteoarthritis	77
Chapter 6 Biomechanical and neuromuscular adaptations during a stepping-down task in relation to self-reported knee instability in patients with knee early or established knee osteoarthritis	95
Chapter 7 The avoidance model in knee and hip osteoarthritis: a review of the evidence	119
Chapter 8 General discussion	145
Summary	163
Samenvatting	169
Acknowledgements	175
About the Author	179
List of publications	181
PhD portafolio	185
