Chapter 1	Aim of the thesis	9
Chapter 2	Introduction, review of the literature	13
2.1	Corneal structure	15
	Macroscopic anatomy	15
	Microscopic anatomy	16
	Endothelial wound healing	22
	Corneal transparency	23
	Cornea metabolism	29
2.2	Eye banking; developments	31
	Period when living donor tissue was used	31
	Period when post mortem tissue was used	31
	Period of storage of corneoscleral discs in tissue culture medium	32
	<i>Development of hypothermic storage solutions</i>	32
	<i>Development of organ culture storage procedure</i>	33
	<i>Application</i>	33
2.3	Donor tissue safety	35
2.3.1	Preventing transmission of communicable diseases by the donor tissue	35
	Historic perspective	35
	Proven systemic transmissions	37
	Local transmissions	37
	Concluding remarks	38
2.3.2	Prevention of donor related ocular infections	39
	Decontamination procedures	39
	<i>Donor tissue selection</i>	39
	<i>During retrieval</i>	39
	<i>On arrival in the eye bank</i>	40
	<i>During storage</i>	40
	Effectiveness of the decontamination process	41
	Donor related keratitis and endophthalmitis	42
	<i>Fungal keratitis and endophthalmitis</i>	42
	<i>Bacterial keratitis and endophthalmitis</i>	42

2.4	Donor tissue quality	43
	Introduction	43
	Parameters	44
	<i>Donor age</i>	44
	<i>Post mortem delay</i>	45
	<i>Morphology corneal endothelium</i>	45
	<i>Endothelial evaluation methods, application and reliability</i>	47
	<i>Corneal curvature</i>	48
	<i>Selection for lamellar grafting</i>	48
2.5	Methods of corneal preservation	49
	Moist chamber storage	49
	<i>Technical aspects</i>	49
	<i>Microbiological testing</i>	50
	<i>Tissue evaluation method</i>	50
	<i>Pros and cons of moist chamber storage</i>	50
	Hypothermic storage	51
	<i>Technical aspects</i>	51
	<i>Microbiological testing</i>	52
	<i>Tissue evaluation method</i>	52
	<i>Pros and cons of hypothermic storage</i>	52
	Organ culture procedure	53
	<i>Technical aspects</i>	53
	<i>Microbiological testing</i>	54
	<i>Tissue evaluation method</i>	54
	<i>Pros and cons of organ culture</i>	55
2.6	Corneal transplantation; developments	57
	International developments	57
	Developments in the Netherlands	61
2.7	Follow-up	63
	Introduction	63
	Outcomes	64
	<i>Graft failure</i>	64
	<i>Clear graft</i>	64
	<i>Postoperative central endothelial cell density</i>	65
	<i>Corneal thickness</i>	65
	<i>Graft survival</i>	66
	<i>Serious adverse events</i>	66
	<i>Serious adverse reactions</i>	67
	<i>Visual disability</i>	67
	<i>Patient's satisfaction</i>	68
	<i>Concluding remarks</i>	68
	Corneal graft registries	69

Chapter 3	Validation of storage methods	97
3.1	Clinical comparison of grafts stored in McCarey-Kaufman medium at 4°C and in corneal organ culture at 31°C <i>Arch Ophthalmol 1992; 110: 203-205</i>	99
3.2	Prospective clinical evaluation of McCarey-Kaufman and organ culture cornea preservation media: 14-year follow-up <i>Cornea 2008; 27: 996-1000</i>	111
Chapter 4	Validation of tissue quality parameters	123
4.1	Validation of tissue quality parameters for donor corneas, designated for emergency use in preservation of the globe <i>Cornea 2009, December 3 (E pub ahead of print) publication expected 2010</i>	125
4.2	Validation of tissue quality parameters for donor corneas, designated for emergency cases: corneal graft survival <i>Acta Ophthalmologica 2009, December 21 (E pub ahead of print) publication expected 2010.</i>	139
4.3	Long term survival of 136 and 141 year old geriatric corneal grafts in a single patient, a case report <i>Submitted</i>	157
Chapter 5	Quality aspects in eye banking	165
5.1	Different eye banks for tissue processing and graft outcome: trust and control <i>Submitted</i>	167
5.2	Organ Culture Preservation for corneal tissue. Technical and quality aspects. <i>Dev Ophthalmol. Basel, Karger 2009; 43: 31-46</i>	181
Chapter 6	Summary and conclusions / Samenvatting en conclusies	201
