Biochemical markers in dementia: from mice to men

Contents

Chapter 1  General introduction and aim of the thesis
1.1 General Introduction  10
1.2 Aims of thesis  14

Chapter 2  Production and characterization of mAbs against Aβ
2.1 Quantification of Aβ40 in CSF  17
2.2 IHC characterization of novel mAbs against the N-terminus of Aβ  35

Chapter 3  CSF measurements in AD: Clinical chemical properties
3.1 Variability in longitudinal CSF Tau and P-Tau measurements  53
3.2 Aβ42, Tau and P-Tau as CSF biomarkers for the diagnosis of AD  63
3.3 A worldwide multicenter comparison of assays for CSF biomarkers in AD  73

Chapter 4  Biomarkers in the clinic
4.1 Additional value of CSF Aβ40 in the differentiation of FTLD and SMC  83
4.2 Serum amyloid P component as biomarker in MCI and AD  93
4.3 Evaluation of plasma Aβ40 and Aβ42 as predictors of conversion to AD  103

Chapter 5  Biomarkers in future
5.1 New research criteria for AD diagnosis applied in a memory clinic population  107

Chapter 6  Summary, general discussion, and conclusion  117

Chapter 7
7.1 Nederlandse samenvatting
7.2 Dankwoord
7.3 Publication list
7.4 Curriculum Vitae
7.5 References

7.5  References
