

CONTENTS

	List of abbreviations	
Chapter 1:	Introduction	11
Chapter 2:	Induction of resistance to trifluorothymidine in H630 human colon cancer cells is associated with decreased thymidine kinase expression or overexpression of secretory phospholipase A2 <i>Molecular Cancer Therapeutics 9:1047-57, 2010</i>	31
Chapter 3:	Trifluorothymidine induces cell death independently of p53 <i>Nucleosides, Nucleotides and Nucleic acids 27:699-703, 2008</i>	53
Chapter 4:	Differential activation of cell death signaling pathways and autophagy results in an increased cytotoxic potential for TFT compared to 5-FU in colon cancer cells <i>International Journal of Cancer 126:2457-68, 2010</i>	59
Chapter 5:	Synergistic interaction between trifluorothymidine and docetaxel is sequence dependent <i>Cancer Science 99:2302-8, 2008</i>	81
Chapter 6:	Molecular mechanism underlying the synergistic interaction between trifluorothymidine and the epidermal growth factor receptor inhibitor erlotinib in human colorectal cancer cell lines <i>Cancer Science 101:440-47, 2010</i>	99
Chapter 7:	The role of platelet-derived endothelial cell growth factor/thymidine phosphorylase in tumor behavior <i>Nucleosides Nucleotides Nucleic Acids 27:681-91, 2008</i>	119
Chapter 8:	Accumulation of thymidine-derived sugars in thymidine phosphorylase overexpressing cells <i>Biochemical Pharmacology, submitted</i>	133
Chapter 9:	Increased migration by stimulation of thymidine phosphorylase in endothelial cells of different origin <i>Nucleosides, Nucleotides and Nucleic acids, in press</i>	149
Chapter 10:	Thymidine phosphorylase in cancer cells stimulates human endothelial cell migration and invasion by increasing the secretion of angiogenic factors	155
Chapter 11:	Summarizing discussion and concluding remarks	175
	Dutch summary - Nederlandse samenvatting	187
