

# Contents

- 1 General introduction and outline of the thesis**
  - 2 Measuring antimicrobial use on a patient level**
    - 2.1 Appropriateness of antimicrobial therapy measured by repeated prevalence surveys
    - 2.2 Appropriateness of antimicrobial therapy: A multicentre prevalence survey
  - 3 Highly resistant microorganisms; determinants for incidence of resistance and transmission**
    - 3.1 Correlation between antibiotic use and resistance in a hospital: Temporary and ward-specific observations
    - 3.2 Highly resistant micro-organisms in a teaching hospital: The role of horizontal spread in an endemic setting
    - 3.3 Reservoir of integron class 1 in highly resistant Gram negative micro-organisms in a teaching hospital
    - 3.4 Highly resistant Gram-negative micro-organisms: Incidence density and occurrence of nosocomial transmission (TRIANGLE study)
  - 4 Targeted interventions to improve antimicrobial use in hospitals**
    - 4.1 A standardised protocol for perioperative antibiotic prophylaxis is associated with improvement of timing and reduction of costs
    - 4.2 Improving fluoroquinolone use in the hospital using a bundle of interventions
  - 5 General discussion**
- Samenvatting en Conclusies
