Chapter 1	11
General introduction	
Chapter 2	29
The impact of bone mineral density and disc degeneration on shear strength and stiffness of the lumbar spine following laminectomy	
<i>European Spine Journal (2012) 21: 530 – 536</i>	
Chapter 3	47
Which factors prognosticate shear instability following lumbar laminectomy?	
<i>European Spine Journal (2012) 21: 2640 – 2648</i>	
Chapter 4	65
Torsion biomechanics of the spine following lumbar laminectomy: a human cadaver study	
<i>European Spine Journal (2013) 22: 1785 – 1793</i>	
Chapter 5	83
Which factors prognosticate rotational instability following lumbar laminectomy?	
<i>European Spine Journal (2013) 22: 2897 – 2903</i>	
Chapter 6	99
Effects of repetitive movement on range of motion and stiffness around the neutral orientation of the human lumbar spine	
<i>Journal of Biomechanics (2013) 46: 187 – 191</i>	
Chapter 7	111
Lumbar laminectomy alters the biomechanical behavior of the treated segment without affecting adjacent segments	
<i>Clinical Biomechanics (2014) 29: 912 – 917</i>	
Chapter 8	129
The effects of single level instrumented laminectomy on adjacent biomechanics	
<i>Accepted on October 8th 2014 for publication in Global Spine Journal - in press</i>	

Chapter 9	147
General discussion	
Chapter 10	163
Nederlandse samenvatting	
Appendices	175
