

Contents

- Chapter 1** : Introduction
- Chapter 2** : The Chronological Dating of Injury
- Chapter 3** : A new method to determine wound age in early vital skin injuries: a probability scoring system using expression levels of Fibronectin, CD62-P and Factor VIII in wound hemorrhage.
- Chapter 4** : Acute inflammation is persistent locally in burn wounds: a pivotal role for complement and C-reactive protein.
- Chapter 5** : Moisture inhibits the decomposition process of tissue buried in sea sand: a forensic case related study.
- Chapter 6** : Validation of ultrastructural analysis of mitochondrial deposits in cardiomyocytes as a method of detecting early acute myocardial infarction in humans.
- Chapter 7** : The basement membrane of intramyocardial capillaries is thickened in patients with acute myocardial infarction.
- Chapter 8** : Pulmonary embolism causes endomyocarditis in the human heart.
- Chapter 9** : Discussion
