

## **Table of contents**

1. Introduction
2. The effect of amyloid pathology and glucose metabolism on cortical volume loss over time in Alzheimer's disease.
3. Amyloid and its association with default network integrity in Alzheimer's disease.
4. Widespread disruption of functional connectivity in early-onset Alzheimer's disease.
5. Brain network alterations in Alzheimer's disease measured by Eigenvector centrality in fMRI are related to cognition and CSF biomarkers.
6. The association of glucose metabolism and eigenvector centrality in Alzheimer's disease.
7. Cerebral perfusion and metabolism in subjective memory complaints, Alzheimer's and frontotemporal dementia: two sides of the same coin?
8. Improved image-based classification of Alzheimer's disease using multi-modality brain imaging data.
9. Effects of MR based attenuation correction on clinical interpretation and quantification of [18F]flutemetamol scans: A comparison between PET/CT and PET/MR.
10. Summary and general discussion
