

Table of contents

Chapter 1	General introduction	9
Chapter 2	Aims and design	19
Part I	Transplacental transport of IgG antibodies to preterm infants.	
Chapter 3	Transplacental transport of IgG antibodies specific to preterm infants: a review of the literature.	29
Chapter 4	Transplacental transport of IgG antibodies specific for pertussis, diphtheria, tetanus, haemophilus influenza type b, and Neisseria meningitidis serogroup C is lower in preterm infants compared with term infants.	41
Chapter 5	Transplacental transport of IgG antibodies specific for measles, mumps, rubella and varicella zoster is lower in preterm infants compared with term infants.	51
Part II	The effects of supplementation of neutral and acidic oligosaccharides	
Chapter 6	The effects of supplementation of neutral and acidic oligosaccharides on serious infectious morbidity and short-term outcome in preterm infants: a randomised, double blind, placebo-controlled trial.	65
Chapter 7	Neonatal modulation of serum cytokine profiles by a specific mixture of anti-inflammatory neutral and acidic oligosaccharides in preterm infants	79
Chapter 8	Neutral and acidic oligosaccharides supplementation does not increase the vaccine antibody response in preterm infants in a randomized clinical trial.	93
Chapter 9	Neutral and acidic oligosaccharides reduce antibody responses upon antibody heptavalent pneumococcal conjugate in preterm infants in a randomized clinical trial.	105
Chapter 10	Neurodevelopmental outcomes in preterm infants at 24 months of age: influence of neonatal scGOS/lcFOS/pAOS-supplementation and the potential role for microbiome and cytokines.	119

Chapter 11	scGOS/lcFOS starts increasing the capacity to produce short-chain fatty acids in very preterm infants feces.	131
Chapter 12	General discussion	141
	Summary	155
	Samenvatting	161
	References	167
	List of publications	187
	Curriculum Vitae	190
	Dankwoord	195
