

CONTENTS

	Page
Section 1: A general introduction into the role of dendritic cell during viral infections	8
Section 2: DC-SIGN⁺ DCs: The “ideal” targets for HIV-1	17
2.1 Human immunodeficiency virus type 1: structure, pathogenesis and the pandemic	18
2.2 The role of DC-SIGN in the transmission of HIV-1 through dendritic cells	25
2.3 Syndecan-3 is a dendritic cell-specific attachment receptor for HIV-1	35
2.4 Concluding remarks section 2	42
Section 3: Dendritic cells have a dual role in the pathogenesis of measles.	43
3.1 Measles virus: structure, pathogenesis and interaction with dendritic cells	44
3.2 Predominant infection of CD150 ⁺ lymphocytes and dendritic cells during measles virus infection of macaques.	49
3.3 Measles virus targets DC-SIGN to enhance dendritic cell infection.	62
3.4 DC-SIGN and CD150 have distinct roles in transmission of measles virus from dendritic cells to T-lymphocytes	73
3.5 Concluding remarks section 3	86
Section 4: DC-SIGN: A universal receptor for viruses?	87
4.1 DC-SIGN specificity and viral glycosylation	88
4.2 DC-SIGN enhances herpes simplex virus infection of dendritic cells <i>in cis</i>	93
4.3 Binding of human papilloma virus L1 virus-like particles to dendritic cells is mediated through heparan sulfates and induces immune activation.	104
4.4 Concluding remarks section 4	118
Section 5: Langerhans cells protect against viral infections	121
5.1 Langerhans cells, Birbeck granules and Langerin	122
5.2 Langerin is a natural barrier to HIV-1 transmission by Langerhans cells	131
5.3 Langerin capture measles virus for viral clearance and MHC class-II presentation	137
5.4 Concluding remarks section 5	154

	Page
Section 6: Risk factors to acquire HIV-1: A role for Langerhans cells?	155
6.1 Risk factors to acquire HIV-1	156
6.2 Distribution of HIV-1 target cells in male and female genital tissue	161
6.3 TNF α and TLR agonists increase susceptibility to HIV-1 infection <i>ex vivo</i> by modulating Langerhans cells.	175
6.4 Herpes simplex virus enhances transmission of HIV-1 by LCs	195
6.5 Concluding remarks section 6	204
Section 7: Rational design of HIV-1 microbicides	205
7.1 How to prevent HIV-1 transmission?	206
7.2 Hepatitis C virus NS5A anchor peptide inhibits both HIV-1 and herpes simplex virus infection: The perfect microbicide?	211
7.3 Concluding remarks section 7	222
Section 8: Discussion: from a molecular to a global level	223
8.1 Molecular level: Virus receptors on DCs	225
8.2 Viral level: Do lymphotropic viruses fool dendritic cells?	230
8.3 Cellular level: Do dendritic cells fool lymphotropic viruses?	235
8.4 Level of the host: Host factors and HIV-1 transmission	239
8.5 Global level: A multi-layered model to describe HIV-1 transmission	243
8.6 Concluding remarks section 8	252
