<b>Chapter</b>	<b>Title</b>	<b>Page number</b>
Chapter 1	General introduction	7
Chapter 2	Haplotype <i>IL10</i> GGC is positively and HLA- <i>DQA1</i> *05- <i>DQB1</i> *02 is negatively associated with radiographic progression in undifferentiated arthritis	15
Chapter 3	The role of the shared epitope in arthralgia with anti-cyclic citrullinated peptide antibodies (anti-CCP), and its effect on anti-CCP levels	33
Chapter 4	Different properties of ACPA and IgM-RF derived from a large dataset: further evidence of two distinct autoantibody systems	43
Chapter 5	Levels of anti-citrullinated protein antibodies and IgM rheumatoid factor are not associated with outcome in early arthritis patients: a cohort study	55
Chapter 6	Antibodies to mutated citrullinated vimentin and disease activity score in early arthritis: a cohort study	67
Chapter 7	Women with early rheumatoid arthritis have more disease activity and use more antirheumatic therapy compared with men, but have similar joint damage after 5 years	79
Chapter 8	High prevalence of vertebral deformities in elderly patients with early rheumatoid arthritis	93
Chapter 9	Prevalence of hand symptoms, impairments and activity limitations in rheumatoid arthritis in relation to disease duration	97
Chapter 10	Predictors of stenosing tenosynovitis in the hand and hand-related activity limitations in patients with rheumatoid arthritis	111
Chapter 11	Summary and General Discussion	125
	Samenvatting	133
	Publicaties	140
	Dankwoord	142
	Curriculum Vitae	144
